CONTENTS

Release 0.1

Date January 13, 2012

Contents:

INTRODUCTION

Version 0.1.0

Keywords django, python

– Django-country-dialcode is an open source project written in Python, using the Django Framework.

The license is MIT.

1.1 Overview

Django-country-dialcode is a Django application which provide Dial Code and Country data and make it easy to reuse quickly into your django application

1.2 Usage

In your models add the following

```
dialcode = models.ForeignKey(Prefix, verbose_name=_("Destination"), null=True,  
                           blank=True, help_text=_("Select Prefix"))
```

1.3 Documentation

Extensive documentation is available on ‘Read the Docs’: <http://django-country-dialcode.readthedocs.org>

1.4 Contributing

If you’ve found a bug, implemented a feature or customized the template and think it is useful then please consider contributing. Patches, pull requests or just suggestions are welcome!

Source code: <http://github.com/Star2Billing/django-country-dialcode>

If you don’t like Github and Git you’re welcome to send regular patches.

Bug tracker: <https://github.com/Star2Billing/django-country-dialcode/issues>

1.5 License

Copyright (c) 2011 Star2Billing S.L. <info@star2billing.com>

django-country-dialcode is licensed under MIT, see *MIT-LICENSE.txt*.

1.6 Credit

django-country-dialcode is a Star2Billing-Sponsored Community Project, for more information visit <http://www.star2billing.com> or email us at info@star2billing.com

INSTALLATION OVERVIEW

2.1 Install requirements

A requirements file stores a list of dependencies to be installed for your project/application.

To get started with Django-country-dialcode you must have the following installed:

- python >= 2.4 (programming language)
- Apache / http server with WSGI modules
- Django Framework >= 1.3 (Python based Web framework)

2.2 Install requirements

Use PIP to install the dependencies listed in the requirements file,:

```
$ pip install -r requirements.txt
```

2.3 Configuration

Add country_dialcode into INSTALLED_APPS in settings.py:

```
INSTALLED_APPS = (
    ...
    'country_dialcode',
    ...)
```

Run following commands:

```
python manage.py syncdb
```
